Senior Java Web Application Developer

Company Overview

Creator of the Emmi™ family of online patient education tools.

Emmi Solutions is recognized as the market leader in interactive healthcare communications supporting better healthcare delivery. Emmi engages patients and their families and caregivers with easy-to-follow, actionable information so they can understand how to take control of a chronic disease and what to expect before, during and after surgery. The Emmi series is designed to manage patient expectations, improve patient safety, increase patient compliance and reinforce risk mitigation. To learn more, please visit www.emmisolutions.com.

Position Overview

The senior Java Web Application developer is responsible for the technical specification, design and development of software that forms the basis of the Emmi Solutions' healthcare communications platform and internal business operations. This individual must be detail oriented, independent, nimble, and focused on building systems the right way from the start. Working with various teams across the company, the Senior Developer will need to be able to balance business and technical issues while maintaining and improving product quality. The ideal candidate will have a desire to be involved in, and will be a significant contributor to all aspects of software development – architecture, design, coding, documentation and maintenance.

Primary Responsibilities

- Design, develop and maintain Emmi Solutions' J2EE-compliant Internet applications utilizing JSPs, Servlets, EJBs, JDBC, J2EE Design Patterns, SQL, XML, HTML, CSS and JavaScript
- Design, develop and maintain applications to run on the JBoss application server
- Design applications to meet business and technical requirements
- Work with business analysts, project, product and release managers and internal customers to ensure that delivery expectations are met

Job Qualifications

- Strong professional Java programming experience (min. 6 years)
- Strong experience developing *n*-tier Internet applications with Java/J2EE (EJB, JSP, Servlet) (min. 5 years)
- Strong HTML, CSS, Javascript, XML and XSLT experience (min. 5 years)
- Strong application and object-oriented design and development experience (min. 6 years)
- Experience with JBoss or similar J2EE application server(s)
- Knowledge and experience with SQL and relational database concepts
- Experience with the full software development lifecycle in a collaborative environment
- Strong organizational, communication and problem-solving skills
- Ability to work both independently and in a collaborative manner with technology group and other departments in a rapidly changing environment
- Ability to handle multiple priorities in a fast paced work environment
- Customer-focused and responsive
- Bachelors degree in Computer Science or related field (or equivalent experience)

We're in this together.

- Project/team lead experience a plus
- Experience with user interface and user experience development and issues a plus
- Experience writing functional and technical specifications
- Healthcare technology and HIPAA experience a plus
- Experience with Linux a plus
- Experience developing in Flash ActionScript a plus
- Experience with Eclipse, Ant, Bugzilla and continuous integration a plus
